

ServiceNow Flow Designer Project

Phase 2 – Requirements

Employee ID Card Request Workflow

Objective: Define requirements for an automated ID card request process where requests are reviewed and assigned to the administration team.

Trigger: When an employee submits a new ID card request.

Required Inputs

1	Employee details
2	Department
3	Request type: New/Replacement
4	Reason

Flow Steps

1	Capture request details
2	Validate mandatory fields
3	Determine whether the request is New or Replacement
4	Route the request to the Administration team
5	Create a fulfillment task
6	Notify the employee about task creation

ServiceNow Components: Flow Designer, Catalog Item, Assignment, Conditions, Task creation, Notifications

Expected Outcome: Creates a clear requirements-to-fulfillment process for employee ID cards.

Interview Explanation: I designed this project using ServiceNow Flow Designer to automate the request lifecycle. The flow starts from a trigger, applies conditions, performs actions or approvals, creates tasks when required, and sends notifications to the relevant users.
