

ServiceNow Flow Designer Project

Phase 3 – Project Design

Conference Room Booking Automation

Objective: Design a Flow Designer solution that handles meeting-room booking requests and automatically informs the requester about approval or availability.

Trigger: When a conference-room booking request is submitted.

Required Inputs

1	Requester
2	Meeting date
3	Start/end time
4	Room size
5	Meeting purpose

Flow Steps

1	Receive the booking request
2	Check required booking information
3	Evaluate room requirements
4	Route the request to the facilities team if review is required
5	Update booking status
6	Send confirmation or rejection notification

ServiceNow Components: Flow Designer, Catalog Item, Decision/Condition, Approvals, Notifications

Expected Outcome: Provides a structured design for managing meeting-room requests.

Interview Explanation: I designed this project using ServiceNow Flow Designer to automate the request lifecycle. The flow starts from a trigger, applies conditions, performs actions or approvals, creates tasks when required, and sends notifications to the relevant users.
