

ServiceNow Flow Designer Project

Phase 4 – Development

New Employee Email Account Creation

Objective: Develop an automated workflow that creates an IT task whenever a new employee needs an official email account.

Trigger: When HR submits a new employee IT setup request.

Required Inputs

1	Employee name
2	Employee ID
3	Department
4	Joining date
5	Manager

Flow Steps

1	Trigger from the new employee request
2	Validate employee information
3	Create an email-account setup task for IT
4	Assign the task to the correct support group
5	Send task notification
6	Update the request after task completion

ServiceNow Components: Flow Designer, Service Catalog, Task action, Assignment, Notifications

Expected Outcome: Speeds up email-account provisioning and reduces missed onboarding tasks.

Interview Explanation: I designed this project using ServiceNow Flow Designer to automate the request lifecycle. The flow starts from a trigger, applies conditions, performs actions or approvals, creates tasks when required, and sends notifications to the relevant users.
