

ServiceNow Flow Designer Project

Phase 5 – Testing

Printer Access Request Workflow

Objective: Test a Flow Designer workflow that receives printer-access requests and routes them to the appropriate IT support team.

Trigger: When a printer-access request is submitted.

Required Inputs

1	Employee
2	Department
3	Printer/location
4	Access reason

Flow Steps

1	Submit printer-access request
2	Test mandatory-field validation
3	Test department/location condition
4	Assign task to the correct support group
5	Test approval or rejection path
6	Test completion notification

ServiceNow Components: Flow Designer, Conditions, Assignment, Approval, Notifications, Test data

Expected Outcome: Provides positive, negative, and exception test scenarios before production deployment.

Interview Explanation: I designed this project using ServiceNow Flow Designer to automate the request lifecycle. The flow starts from a trigger, applies conditions, performs actions or approvals, creates tasks when required, and sends notifications to the relevant users.
