

# ServiceNow Flow Designer Project

Phase 6 – Deployment

## IT Asset Handover Automation

**Objective:** Deploy a workflow that creates asset-handover tasks when an employee receives company equipment.

**Trigger:** When an asset is assigned to an employee.

## Required Inputs

|   |                 |
|---|-----------------|
| 1 | Employee        |
| 2 | Asset number    |
| 3 | Asset type      |
| 4 | Assignment date |
| 5 | Location        |

## Flow Steps

|   |                                                   |
|---|---------------------------------------------------|
| 1 | Detect asset assignment                           |
| 2 | Create an asset-handover task                     |
| 3 | Assign the task to the responsible IT/asset team  |
| 4 | Send handover instructions                        |
| 5 | Update task after confirmation                    |
| 6 | Notify the employee when the handover is recorded |

**ServiceNow Components:** Flow Designer, Asset Management, Task creation, Assignment, Notifications

**Expected Outcome:** Makes asset handover traceable and provides a consistent deployment process.

**Interview Explanation:** I designed this project using ServiceNow Flow Designer to automate the request lifecycle. The flow starts from a trigger, applies conditions, performs actions or approvals, creates tasks when required, and sends notifications to the relevant users.
