

ServiceNow Flow Designer Project

Phase 7 – Maintenance

Service Request Reminder & Escalation

Objective: Maintain an automated flow that reminds support teams about pending service requests and escalates overdue requests.

Trigger: When a service request remains pending for a defined period.

Required Inputs

1	Request number
2	Assignment group
3	Priority
4	Created date
5	Due date

Flow Steps

1	Check pending requests periodically
2	Identify requests approaching the due time
3	Send a reminder to the assigned team
4	If overdue, escalate to the responsible lead
5	Record the escalation
6	Continue normal processing after resolution

ServiceNow Components: Flow Designer, Scheduled/record trigger, Conditions, Notifications, Escalation, Reporting

Expected Outcome: Helps maintain workflow performance and reduces delays in service-request fulfillment.

Interview Explanation: I designed this project using ServiceNow Flow Designer to automate the request lifecycle. The flow starts from a trigger, applies conditions, performs actions or approvals, creates tasks when required, and sends notifications to the relevant users.
